

# Riverbed® SteelHead™ Solutions

Managing Application Performance in a Hybrid World

Today, employees, customers, and partners have become increasingly mobile, and more business-critical applications are moving to public clouds for Software-as-a-Service (SaaS).

Network managers are leveraging a combination of hybrid networks that include MPLS for business-critical applications and compliance, Internet VPN, and the lower cost, public Internet for real-time application delivery to location-independent users. This defines the hybrid enterprise. Riverbed® SteelHead™ solutions deliver comprehensive visibility, optimization and control of all applications, including on-premises and cloud-based applications, to deliver extraordinary application performance no matter where users are located or when changes in business requirements occur—providing you with them flexibility for your business to stay agile.

## Visibility. Optimization. Control.

Companies of all sizes depend on Riverbed to improve the performance of all applications across the hybrid enterprise. Increased visibility into and control of both on-premises and cloud-based applications help improve end-user experience and reduce the complexity of managing performance over hybrid networks.

## Key Benefits

### Application acceleration and reduced bandwidth consumption

- Increase performance over hybrid networks for on-premises, cloud, and SaaS applications up to 100x
- Reduce bandwidth utilization by up to 98%, deferring costly network bandwidth upgrades

- Ensure the best performance for the largest number of applications on premise, in the cloud or SaaS applications including Microsoft Office 365, Microsoft Dynamics CRM, Salesforce.com and Box

### Integrated visibility

- Enables faster, more effective troubleshooting with end user experience visibility into SteelHead-optimized and non-optimized applications
- Quickly discern network from SaaS provider problems with visibility into network versus service provider server delays

### Enhanced control

- Easily translate your business intent into application-centric business policies with a simplified, wizard-like approach
- Quickly derive all path possibilities for applications across hybrid networks to facilitate configuration
- Leverage centralized, application-aware policies to simplify and automate configuration and deployment of network services across hybrid networks
- Secure all traffic between SteelHead solutions across private and Internet links with standards-based encryption for added security and regulatory compliance

## About Riverbed

Riverbed, at more than \$1 billion in annual revenue, is the leader in application performance infrastructure, delivering the most complete platform for the hybrid enterprise to ensure applications perform as expected, data is always available when needed, and performance issues can be

proactively detected and resolved before impacting business performance. Riverbed enables hybrid enterprises to transform application performance into a competitive advantage by maximizing employee productivity and leveraging IT to create new forms of operational agility.

Riverbed's 27,000+ customers include 97% of the Fortune 100 and 98% of the Forbes Global 100.

Integrio Technologies, an SBA-designated small business headquartered in Herndon, Va., is an IT integration and engineering company that offers reliable, cost-effective, secure solutions for organizations seeking to develop new capabilities and optimize legacy systems. Our company collaborates with its customers, partners and employees to provide outstanding cutting-edge solutions for network performance, secure wireless infrastructure, software application lifecycle support, and physical cyber security that support the missions of federal, state and local government agencies.
